NeuroPort™ System

The NeuroPort™ system is a highly-configurable, easy-to-use multichannel data acquisition system used for recording and monitoring brain electrical activity. The NeuroPort™ System is capable of recording both high resolution (action potentials) and low resolution (EEG) signals simultaneously and it provides the clinician with the tools to analyze them.

1 Neural Signal Processor – Real-time processing for up to 128 electrodes, 16 auxiliary analog channels and individual TTL or strobed-word experiment events (multiple systems can be synchronized for more channels).

2 Front-End Amplifier – Amplifies, filters and digitizes neural signals before converting to a single multiplexed optical output.

Applications

Example Clinical Applications

Patients undergoing surgery for diagnosis and treatment of

- >> Epilepsy
- >> Parkinson's disease
- >> Dystonia
- >> Traumatic brain injury
- >> Stroke
- >> Tinnitus

Key Features

Hardware

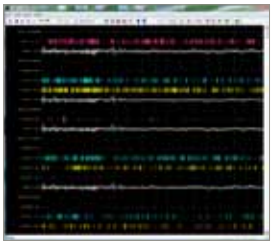
- >> Compatible with traditional surface EEG/EMG/EKG electrodes, ECoG grids (macro and micro), individual metal microelectrodes, microelectrode arrays, and planar silicon probes
- >> Same recording capabilities as traditional EEG systems PLUS ability to record and monitor signals from high-impedance electrodes
- >> Fiber-optic link for reduced system noise
- >> Real-time processing of spikes and field potentials, and other physiological signals
- >> Scalable up to 1024 channels
- >> Flexible I/O options for synchronizing with behavior, stimulus, and video systems

Software

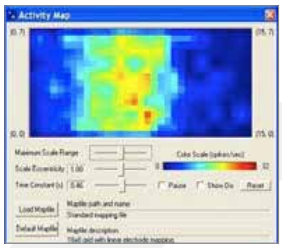
- >> Continuous recording of spikes and field potentials (16 bit, 30 kHz)
- >> Per-channel selection of digital filter/sampling rate
- >> Digital noise (line and magnetic) cancellation
- >> Interface to NeuroExplorer, Spike2, MATLAB, and C/C++ and other 3rd-party software
- >> Adaptive spike detection and 3D spike sorting
- >> Remote control of data acquisition and storage

The NeuroPort™ GUI software

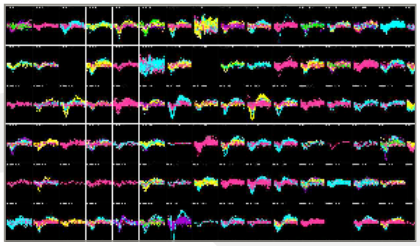
Provides a user-friendly interface to configure the signal processing and visualize the processed data as it is being acquired. The system's powerful and flexible digital architecture allows the user to perform a variety of online functions simultaneously from digital filtering and adaptive 3D spike sorting to data streaming and storage.



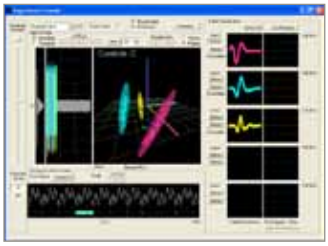
Raster
Scrolling view of spikes, field potentials and event data



Activity Map
Geometric display of spike firing rates across channels



Multichannel Display
See individual action potentials (units) on every channel



3D PCA
Quickly isolate units in 3D PCA space

NeuroPort™ System

Specifications

NeuroPort™ System Front-End Amplifier/Digitizer

Number of inputs	32 to 128 electrodes in banks of 32
Differential configuration	Each input amplified with respect to the common reference in each bank
AC input range	± 8.191 mV
AC input conversion	16-bit resolution at .25 µV/bit
Common mode rejection input range	± 3.0V between inputs and ground
Common mode rejection	> 90 dB at 50/60 Hz
High pass filter	1st-order 0.3 Hz (full-bandwidth mode)
Low pass filter	3rd-order Butterworth 7.5 kHz
Input referred noise	< 3.0 µVrms (14 µVp-p) at full bandwidth
Input impedance	>10 GΩ || 3 pF
Input bias/leakage	± 5 pA typical, +/- 20 pA max
Channel crosstalk	< 1 LSB for all combinations
Maximum input voltage	± 5.0V between inputs and ground
Input connection	34-pin 2 mm male header for each bank
Ground connection	4.4 banana jack / binding post
Output connection	MTRJ digital fiber optic port
Headstage power output	± 5.0V, up to 150 mA for powering optional headstages
Power supply	Five-channel external power supply with sequencing, 120 VAC/60 Hz input or 220 VAC/50 Hz input
Dimensions	110 mm (H) x 42 mm (W) x 186 mm (L)

Neural Signal Processor with Experiment I/O

Digital signal processing	Adaptive noise cancellation and 6th-order hi/band/lo pass digital filtering; Separate digital filters for simultaneous field potential and spike processing for up to 144 channels
Front-end input	MTRJ digital fiber optic port
Experiment analog inputs	Sixteen ± 5.0V, 16-bit analog inputs for experiment or neural signals (BNC)
Experiment analog outputs	Four ± 5.0V, 16-bit analog outputs (BNC) Two line-level audio outputs (BNC + 3.5 mm)
Experiment TTL and strobed-word inputs	One 16-bit input port (DB-37) with individual or strobed-word event detection
Experiment digital outputs	Four single-bit digital outputs (BNC), Synchronization TTL output (BNC)
Experiment serial I/O	RS 232 port (DB-(9M), 115 kbps)
PC interface	1 Gigabit Ethernet
Power supply	3-pin PC power connector (110-240 VAC, 50-60 Hz)
Dimensions	88 mm (H) x 325 mm (W) x 425 mm (L)
Weight	6.8 kg
Mounting options	Table-top rubber feet or 2 U slot in 19-inch instrument rack

Computer requirements (not included with system) Minimum requirements: 2 GHz Intel® Core™2 Duo or equivalent AMD® processor; one available PCI slot; 250 GB hard drive; 4 GB RAM; dual-screen monitor with Windows XP (32-bit) or Windows 7 (32- or 64-bit)
