Based on a unique platform concept, greateyes offers a portfolio of about 20 scientific cameras for imaging and spectroscopy in the UV, VIS and NIR range. The deep cooled, high performance CCD detectors have the most compact design available. They combine highly sensitive sensors with ultra low noise electronics for optimal detection of weak signals. Select among different pixel formats, several sensor technologies and various coatings to find the best solution for your imaging or spectroscopic application.

The full-frame CCD sensors are integrated in hermetically sealed vacuum chambers with single optical windows. Deep cooling of the sensor is achieved by means of multi-stage thermoelectric peltier elements. The cameras are equipped with a rich set of functionalities including flexible binning operation, various trigger and synchronisation modes, software adjustable gain settings as well as temperature monitoring of the sensor and the heat radiation system.

Key features
